Subject: well info for these wells

Ron, can you put together a full report on each of these wells

For the report I'd like the following:

For each well prepare a folder of all sundries, completion repts, well logs (your summary), and other pertinent reports such as water quality reports (need to note on each report where you found the report) flowing/operating pressure, SI pressure

For each well I'd like to have a brief well history to include: spud date, completion date, log dates, re-completion dates, frac dates, construction diagram (if you can't find one - draw one based on available information)

For each well summarize your review of logs - primarily CBL (TOC and quality) and CCNL (for gas or water shows)

Additional information if found

Shoe test after SC set? Results? FET?

Circ loss? depth, volume, what was the fluid, material used to restore circ

Other fluid loss during completion - fluid used to kill well during perf

Type of frac foam/slickwater/gel including frac fluid composition, service company

Remedial cementing where and when

Well at a glance one pager summary (subject or chronology)
